- ◇ Full integrated system to manage multiple functions of the retail business environment
- ◇ Upgrades provided at no charge and no maintenance and support contracts required
- ◇ We can provide consulting service to help you manage your business.

Ask for our detailed feature and benefits diagram that describes and outlines the advantages of using the MaNova system.

Retail repair stores have a lot going on during open business hours and beyond closing time. In these stores, inventories are always being moved around, devices are being inspected or repaired, sales transactions are occurring irregularly, personnel shifts are impacting repair schedules, as well as other issues to contend with. A store using a traditional cash register or a basic accounting system is severely limiting its capabilities and impacting business operations. This is where the MaNova system for store management is the perfect solution for everything your business needs.

The MaNova system can be used to manage inventories as well as take care of sales, repairs, personnel and many other functions. For retail repair stores, the system is extremely effective when it comes to processing orders, tracking repair process and managing inventories. The MaNova software was designed for repair stores, so when an employee inspects a device to repair, they can leave notes in the system for the actual repair person to follow by. Any device that is inspected, that person will know what problems have incurred who performed the work.

Any retail store or repair store operating without a system is at a huge disadvantage because keeping track of large inventories of hundreds of items is nearly impossible. Basic accounting systems may provide tracking of inventory, but doesn't track the repair process as well as keep track of employees, and sales transactions, which makes the daily management of the business much more difficult.

So, take the time to look at the Future Star MaNova Software system for computer repair stores by signing up for a demo of the system. *We believe you should manage your business rather than the business managing you!*

Future Star Software is vertically focused on retail repair stores and repair shops by providing a application that integrates point of sale, product repair process, inventory tracking, employee management along with a business management and marketing system.

We believe employing a complete system, with automated features, will improve decision making, and increase company growth for the business. With our application, you'll be able to better manage your business rather than the business managing you!

Our technology platform is constantly evolving to meet the changing needs of retail businesses. Our application offers continuous process of adding value to the business through the use of new features and functions while keeping current with technology trends
